

You wouldn't buy a black and white TV these days

The technology is way out of date and the world has moved on.

So why ignore the modern technology of *digital* control for your model railway? . . .

Now is the time to consider all the advantages for your next layout:

- Just 2 wires to the track
- And you can run several locos at once
- No need for dead sections
- Or rows of switches
- And a tangled "spaghetti" of wires
- Even the points and signals are under your control

You don't have to know anything about electricity or wiring the layout – simply connect up the transformer to the controller, connect the two wires to the track – and you're up and running!

Quite simply, the decoder inside the loco, with its own specific address will react to the commands sent down the track from the controller. All the other locos, (each with their own decoder) on the same track will either await their own commands, or still be running according to the last instructions which you sent. All your loco addresses are stored in a "library" and can be accessed at any time.

The new **PROFI-BOSS** digital controller, with its large central display and easy to follow symbols, shows you which loco is under direct control, its direction and its speed. All the additional functions – lights, inertia, sounds are all on display and can be accessed directly at touch of a button.

When you call up the points, you will see ten points all displayed at once, or you can even select your "favourites" that need to be changed most on your layout.

You are the master, in control of everything on your layout, with the **PROFI-BOSS** controller nestling comfortably in your hand!

Another big advantage for you – the **PROFI-BOSS** comes from **FLEISCHMANN** with years of experience in the field of digital model railway control!

Everything you need for you to get started is in one of our starter sets – there are several to choose from – at really economical prices – **cheaper than buying all the contents separately!**

Available in N gauge <<piccolo>> or HO gauge, with a choice of steam or diesel **ready-fitted** digital locos!

Because the new **PROFI-BOSS** digital controller can be “daisy-chained” alongside others, using the LocoNet cable, several operators can be running trains together on the layout – ***all at the same time!***

Only one [the master controller] is connected to the track, but all the others have the same accessibility to the library of locos and points on the layout.

You can also switch to “programming mode” to easily program loco addresses and point addresses with the **PROFI-BOSS** nestling in your hand.

All our starter sets, with the **PROFI-BOSS** controller, come with all the tracks to make up an oval with passing loop, digital loco and rolling stock!

Start set of the year – HO 6398 81

Start set of the year – N 9398 81

Both these starter sets have both goods **and** passenger rolling stock included!

Real Value for Money Sets!

Other start sets available also include the track, rolling stock and digital loco, plus the **PROFI-BOSS** controller – **ready to run, at reasonable prices!**

“Cargo Express” HO 6368 81 / N 9368 81

“double-deck commuter train

HO 6369 81 / N 9369 81

The big steam engine set & two trains:

HO – 6370 81

And – a big steam engine set & two trains for N gauge <<piccolo>> modellers too!

N <<piccolo>> 9379 81

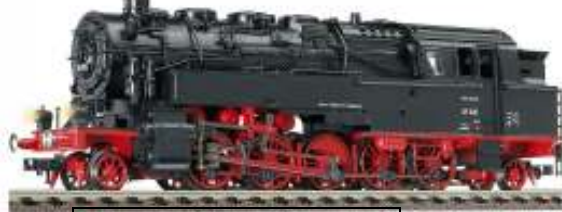

The first starter sets should be available in the shops around July this year.

Don't forget!

Nowadays, there's another, extra aspect to digital control

Sound on board your locos!

Yes, the realistic chuff of the steam exhaust beat, synchronised with the valve gear – whistles, horns, station announcements, “rattling spanners” diesel engines – and even the squeal of the brakes as the loco comes to a halt!

HO – class 95 4055 71

Although not contained in our starter sets, we also have a large range of steam, diesel and electric locos – **already pre-fitted with sound decoders!** You just call up the individual sounds by pressing the relevant function keys on the controller.

7 7420 N gauge “desiro” – with SOUND!

Everything you need in a digital controller is provided by the **PROFI-BOSS** – **It's a long way ahead of the days of the old black and white tv!**
